Realita Pemasaran Digital untuk UMKM

Di era digital 2026, persaingan bisnis semakin ketat. Setiap hari, jutaan orang mencari produk dan layanan di Google. Pertanyaannya: apakah mereka menemukan bisnis Anda atau kompetitor Anda?

Data Google Ads di Indonesia:

- 97% konsumen Indonesia menggunakan Google untuk mencari produk/layanan lokal
- 76% orang yang mencari bisnis lokal mengunjungi toko dalam 24 jam
- Rata-rata bisnis mendapatkan Rp 2 untuk setiap Rp 1 yang dihabiskan di Google Ads
- Google Ads menghasilkan 15% lebih banyak konversi dibanding platform iklan digital lainnya
- 63% klik iklan Google berasal dari mobile device

Mengapa Google Ads Berbeda dari Platform Lain

1. Intent-Based Marketing

Berbeda dengan social media ads yang interruptive (mengganggu), Google Ads menangkap orang yang SUDAH mencari. Ini disebut intent-based marketing.

Contoh:

- Seseorang buka Instagram → melihat iklan sepatu (tidak sedang mencari)
- Seseorang buka Google → ketik "beli sepatu running murah" (SEDANG mencari)

Yang kedua jauh lebih mungkin membeli.

2. Budget Fleksibel

Google Ads bisa dimulai dari budget kecil:

- Minimum: Rp 50.000/hari
- Rekomendasi UMKM: Rp 100.000-500.000/hari
- Bisa pause kapan saja
- Tidak ada minimum commitment

3. Hasil Terukur

Produk Digital Asli SNISHOP.COM

Setiap rupiah yang dikeluarkan bisa dilacak:

- Berapa kali iklan ditampilkan (impressions)
- Berapa kali diklik (clicks)
- Berapa biaya per klik (CPC)
- Berapa yang beli (conversions)

© 2026 SNISHOP.COM - Semua Hak Dilindungi | *Dilarang menggandakan, mendistribusikan, atau memodifikasi tanpa izin tertulis*

- Berapa ROI (return on investment)

4. Targeting Presisi

Target iklan hanya ke orang yang tepat:

- Lokasi: kota, kecamatan, radius tertentu
- Waktu: jam operasional bisnis
- Device: mobile, desktop, tablet
- Bahasa: Indonesia, Inggris, dll
- Keyword: kata kunci yang mereka ketik
- Audience: berdasarkan minat dan behavior

Perbandingan Google Ads vs Platform Lain

Aspek	Google Ads	Facebook Ads	Instagram Ads	TikTok Ads
User Intent	Sangat tinggi	Rendah	Rendah	Sangat rendah
CPC Rata-rata	Rp 1.000-5.000	Rp 500-3.000	Rp 500-3.000	Rp 200-1.500
Conversion Rate	3-5%	1-2%	1-2%	0.5-1.5%
ROAS Rata-rata	3-8x	2-5x	2-4x	1.5-3x
Learning Curve	Medium	Medium	Medium	Low
Best For	High-intent buyers	Brand awareness	Visual products	Young audience

Cara Google Ads Bekerja (Auction System)

Setiap kali seseorang search di Google, terjadi auction (lelang) untuk menentukan iklan mana yang muncul dan di posisi berapa.

Proses Auction:

1. User search keyword
2. Google identify advertisers yang bid pada keyword tersebut
3. Google hitung Ad Rank untuk setiap advertiser:
   - Ad Rank = Max CPC Bid x Quality Score
4. Iklan dengan Ad Rank tertinggi muncul di posisi tertinggi
5. Advertiser bayar hanya ketika iklan diklik (CPC)

Quality Score (Skor Kualitas):

Produk Digital Asli SNISHOP.COM
Dilarang Keras: Copy, Distribusi, Modifikasi
© 2026 Siraj Nur Ihrom - All Rights Reserved

Komponen penting yang menentukan posisi dan biaya iklan:

- Expected CTR (Click-Through Rate): Seberapa mungkin iklan diklik
- Ad Relevance: Seberapa relevan iklan dengan keyword
- Landing Page Experience: Seberapa bagus landing page Anda

Skor 1-10, semakin tinggi semakin baik. Quality Score tinggi = biaya per klik lebih murah.

© 2026 SNISHOP.COM - Semua Hak Dilindungi | *Dilarang menggandakan, mendistribusikan, atau memodifikasi tanpa izin tertulis*

Faktor yang Mempengaruhi Biaya:

- Competition: Semakin banyak advertiser bid keyword yang sama, semakin mahal
- Quality Score: Skor tinggi = biaya lebih rendah
- Ad Rank: Posisi lebih tinggi = biaya lebih tinggi
- Industry: Beberapa industri (insurance, legal) lebih mahal dari yang lain
- Location: Kota besar biasanya lebih mahal dari kota kecil
- Time: Jam tertentu bisa lebih mahal (prime time)

Match Types di Google Ads

Cara Google mencocokkan keyword Anda dengan search query user:

1. Broad Match (Default)

Iklan bisa muncul untuk variasi keyword: sinonim, related searches, misspellings.

Contoh keyword: sepatu running Iklan muncul untuk:

- sepatu lari
- beli sepatu olahraga
- sepatu nike running
- running shoes

Pros: Reach luas Cons: Bisa tidak relevan, boros budget

2. Phrase Match

Iklan muncul ketika user search keyword Anda dalam urutan yang sama, bisa ada kata sebelum/sesudah.

Contoh keyword: "sepatu running" Iklan muncul untuk:

- beli sepatu running
- sepatu running nike
- harga sepatu running murah

Iklan TIDAK muncul untuk:

- running shoes (urutan beda)
- sepatu lari (sinonim)

Pros: Lebih targeted dari broad Cons: Reach lebih terbatas

3. Exact Match

Iklan muncul hanya ketika user search keyword yang persis sama.

Contoh keyword: [sepatu running] Iklan muncul untuk:
